

NO CITY LEFT BEHIND

Laserfiche Document Imaging and Management—Hosted Solution

Our hosted Laserfiche solution enables you to use best-of-class document imaging and management applications without the cost of buying, managing, and supporting the underlying technology.

You can eliminate the need to buy servers and software and the need to employ staff computer technicians to manage the complexity of a high-powered document imaging and management system. This solution delivers peace of mind through secure, reliable document management services that offer cost-saving results and a quick return on investment.

Operational costs are also significantly reduced when you eliminate the need for most of your paper files, file cabinets, storage space, filing time, and retrieval time. In addition, this solution offers your residents access to public records 24x7 through a secure access point which reduces the calls and walk-in requests that your City Clerk receives.

Your documents are stored securely in an off-site data center, expertly maintained and outfitted with modern data security features. With data stored on redundant media, backed-up using enterprise back-up technology, and stored in a secure location, you can be assured that your documents are protected against disaster.

Why store your documents using our hosted Laserfiche solution?

- Increased productivity, allowing your employees, board members, and residents access to critical information faster
- Lower total cost of ownership
- Minimal up-front costs
- Reduced on-going costs
- Predictable monthly fees
- Fast and simple implementation
- Support costs avoided
- Better security
- Ease of sharing information
- Guaranteed data security, data back-up, up-time, and disaster recovery plan
- Best use of your valuable resources
- Scalability
