

# KASPERSKY ANTI-MALWARE PROTECTION SYSTEM

Security Solutions

for Every Layer of the Enterprise

**KASPERSKY** lab

# Kaspersky® Open Space Security

## Our Anti-Malware Protection System protects every layer of the IT infrastructure -- from the endpoint to the cloud, including mobile and USB devices.

### Premium Protection

A single, proprietary, award-winning anti-malware engine across all products provides unmatched malware detection, removal and protection from both known and unknown exploits.

### Comprehensive Coverage

Kaspersky provides comprehensive coverage for a heterogeneous, multi-platform environment, including all versions of Microsoft Windows endpoint and server products, Novell networks, legacy Netware, current Novell server products, Linux and MAC operating systems, Microsoft Exchange and Lotus Notes.

### Exceptional Performance

Super-fast when it comes to scanning systems and network traffic. The smallest possible client footprint and frequent, small updates mean your users have the bandwidth they need, when they need it, which keeps them productive.

### Simplified Manageability

Manage all endpoint and server products from one central view. A new graphical user interface makes security-related management tasks quick and easy. Real-time reports put critical information at your fingertips, in an easy-to-read format so IT managers can focus their attention where it is needed.

### Rapid Deployment

Kaspersky has dramatically reduced the "pain of change" by automating the process of removal, installation and configuration. Management wizards will automatically find all incompatible software, remove it, install Kaspersky, including the granular policy configuration, and with one configurable reboot at the end, the process is done. Remote installation has never been easier. We make rollout in a complex, dispersed environment a snap!

### World-Class Support

We develop all the technology deployed as part of the Kaspersky Anti-Malware Protection System, allowing us to provide the best support from the endpoint to the cloud. Our support teams are in-country, providing support in your language and understanding of your local issues. Kaspersky has the shortest hold times in the industry—less than 5 minutes— and a first-call resolution rate over 90%.

## Business Space Security

Provides high-quality protection for corporate information assets from all types of contemporary Internet threats.

Kaspersky Business Space Security offers protection to workstations, smartphones and file servers from all types of computer threats, prevents epidemics of malicious programs, and keeps information secure and fully accessible to users of network resources. The product was designed to meet the increasing demands of servers operating under heavy loads.

### Product Highlights

- Anti-virus protection for key network nodes: workstations, laptops, file servers and smartphones
- New anti-virus engine ensures optimal use of resources
- Enhanced proactive protection for workstations and file servers against new malicious programs
- On-the-fly scanning of email and Internet traffic
- Personal firewall for protection on any type of network, including Wi-Fi
- Local protection from unsolicited emails and phishing
- Prevents data leaks from lost smartphones
- Protection for endpoints running Windows, Linux and Mac operating systems
- Protection for file servers running Windows, Linux and Novell Netware
- Protection for smartphones includes Windows Mobile, Symbian and BlackBerry
- Comprehensive protection for terminal servers and cluster servers
- Load balancing of server processes
- Full support for 64-bit systems

### Additional Features

- Centralized installation, management and updates
- Scalability
- Dashboards display current status of network anti-virus protection
- Device control to manage employee use of removable media
- Dedicated security policy for remote users
- Support for network access control technology (Cisco® NAC and Microsoft® NAP)
- Comprehensive reports on network protection status

### Available Products

- Workstations
- File Servers
- Management
- Mobile Security

## Enterprise Space Security

Ensures the free flow of information within your organization and secure communication with the outside world. The solution includes components for the protection of workstations, smartphones and both mail and file servers from all types of contemporary computer threats, removing malware from emails and keeping information secure and fully accessible to users of network resources.

### Product Highlights

- Anti-virus protection for critical network nodes: workstations, laptops, file and mail servers as well as smartphones
- New anti-virus engine ensures optimal use of resources
- Enhanced proactive protection for workstations and file servers against new malicious programs
- On-the-fly scanning of email and Internet traffic
- Personal firewall for protection on any type of network, including Wi-Fi
- Local protection from unsolicited emails and phishing
- Prevents data leaks from lost smartphones
- Protection for file servers running Windows, Linux and Novell NetWare
- Comprehensive protection for terminal servers and cluster servers
- Load balancing of server processes
- Anti-virus protection for Sendmail, qmail, Postfix and Exim mail servers
- Scanning of messages, databases and other objects on Lotus Notes/Domino servers
- Scanning of all messages on Microsoft Exchange servers, including public folders
- Blocks mass mailings and malware outbreaks
- Full support for 64-bit systems

### Additional Features

- Centralized installation, management and updates
- Scalability
- Dashboards display current status of network anti-virus protection
- Device Control to manage employee use of removable media
- Dedicated security policy for remote users
- Support for network access control technology (Cisco® NAC and Microsoft® NAP)
- Comprehensive reports on network protection status

### Available Products

- Workstations
- File Servers
- Mail Servers
- Management
- Mobile Security

## Total Space Security

Provides integrated protection for corporate networks of any size or level of complexity from all types of contemporary computer threats.

The solution includes components for the protection of workstations and smartphones, providing users with secure and fast access to company information resources and the Internet, as well as secure communications via email.

### Product Highlights

- Integrated protection from malware, spyware, hacker attacks and spam at all levels of the corporate network from workstations to Internet gateways
- A new anti-virus engine ensures optimal use of resources
- Enhanced proactive protection for workstations and file servers against new malicious programs
- On-the-fly scanning of email and Internet traffic
- Personal firewall for protection on any type of network, including Wi-Fi
- Local protection from unsolicited emails and phishing
- Prevents data leaks from lost smartphones
- Protection for file servers running Windows, Linux and Novell NetWare
- Comprehensive protection for terminal servers and cluster servers
- Load balancing of server processes
- Anti-virus protection for Send mail, qmail, Postfix and Exim mail servers
- Scanning of messages, databases and other objects on Lotus Notes/Domino servers
- Scanning of all messages on Microsoft Exchange servers, including public folders
- Blocks mass mailings and malware outbreaks
- Centralized protection from spam
- Centralized anti-virus scanning of Internet traffic (HTTP/FTP) in real time
- Protects Microsoft ISA Server (including server arrays)
- Support for proxy server appliances
- Full support for 64-bit systems

### Additional Features

- Centralized installation, management and updates
- Scalability
- Dashboards display current status of network anti-virus protection
- Device Control to manage employee use of removable media
- Dedicated security policy for remote users
- Support for network access control technology (Cisco® NAC and Microsoft® NAP)
- Comprehensive reports on network protection status

### Available Products

- Workstations • Anti-Spam
- File Servers • Mobile Security
- Mail Servers • Management
